Experiment 15: Ad Hoc Wireless Network Application

Aim: To develop a wireframe for a mobile application addressing challenges related to ad hoc wireless networks using Figma.

Procedure:

1. Open Figma and create a new design file.
2. Select a smartphone frame for the application.
3. Design a home screen showing nearby wireless devices.
4. Add options for device discovery and peer-to-peer connections.
5. Include a network topology view showing connected nodes.
6. Add route selection, battery status, and secure data-sharing features.
7. Use Prototype mode to connect the screens and test the application's navigation.

Output:

Result: Thus, a wireframe for an ad hoc wireless network management application was designed successfully using Figma.
